Compilation of Northwest Territories Critical Mineral Showings – December 2022

Introduction

This document compiles critical mineral showings information for the Northwest Territories, Canada. Additional information on data and data limitations are described in the section *Critical Mineral Compilation Caveats*. Readers are encouraged to consult this section prior to using the information contained herein.

A primary goal of this compilation is to supplement critical mineral showings data with current land use and land restrictions associated with these showings. The data provided on pages 4 to 29 are available as an attached Excel worksheet and as a [downloadable file](#). Readers are encouraged to use the Excel table to sort or highlight information according to user preference.

The definition of critical mineral used here is that of the Canadian government¹. For the most part, critical minerals and commodities are noted in the table by chemical element symbol. However, some abbreviations reference a mineral species or rock type.

The information contained herein was obtained from various data sources mainly during December 2022. The information therefore represents a ‘snapshot in time’ and cannot be fully relied upon as current. In addition, information for some older mineral showings may not have been updated with more recent information.

This compilation has been assembled from the following information sources:

NTGS Showings, 2022. Northwest Territories Geological Survey Showings database, online; Northwest Territories Geological Survey. Accessed in 2022. <http://app.nwtgeoscience.ca>

Mineral Tenure, 2022. Mineral Tenure database, online; Northwest Territories Centre for Geomatics. Accessed in 2022. https://www.geomatics.gov.nt.ca/en/resources/field_resource_category/data-3/field_resource_category/mineral-tenure-134

Northwest Territories Centre for Geomatics, 2022. Government of the Northwest Territories, Yellowknife, Northwest Territories. <https://www.geomatics.gov.nt.ca>

Critical Mineral Compilation Caveats

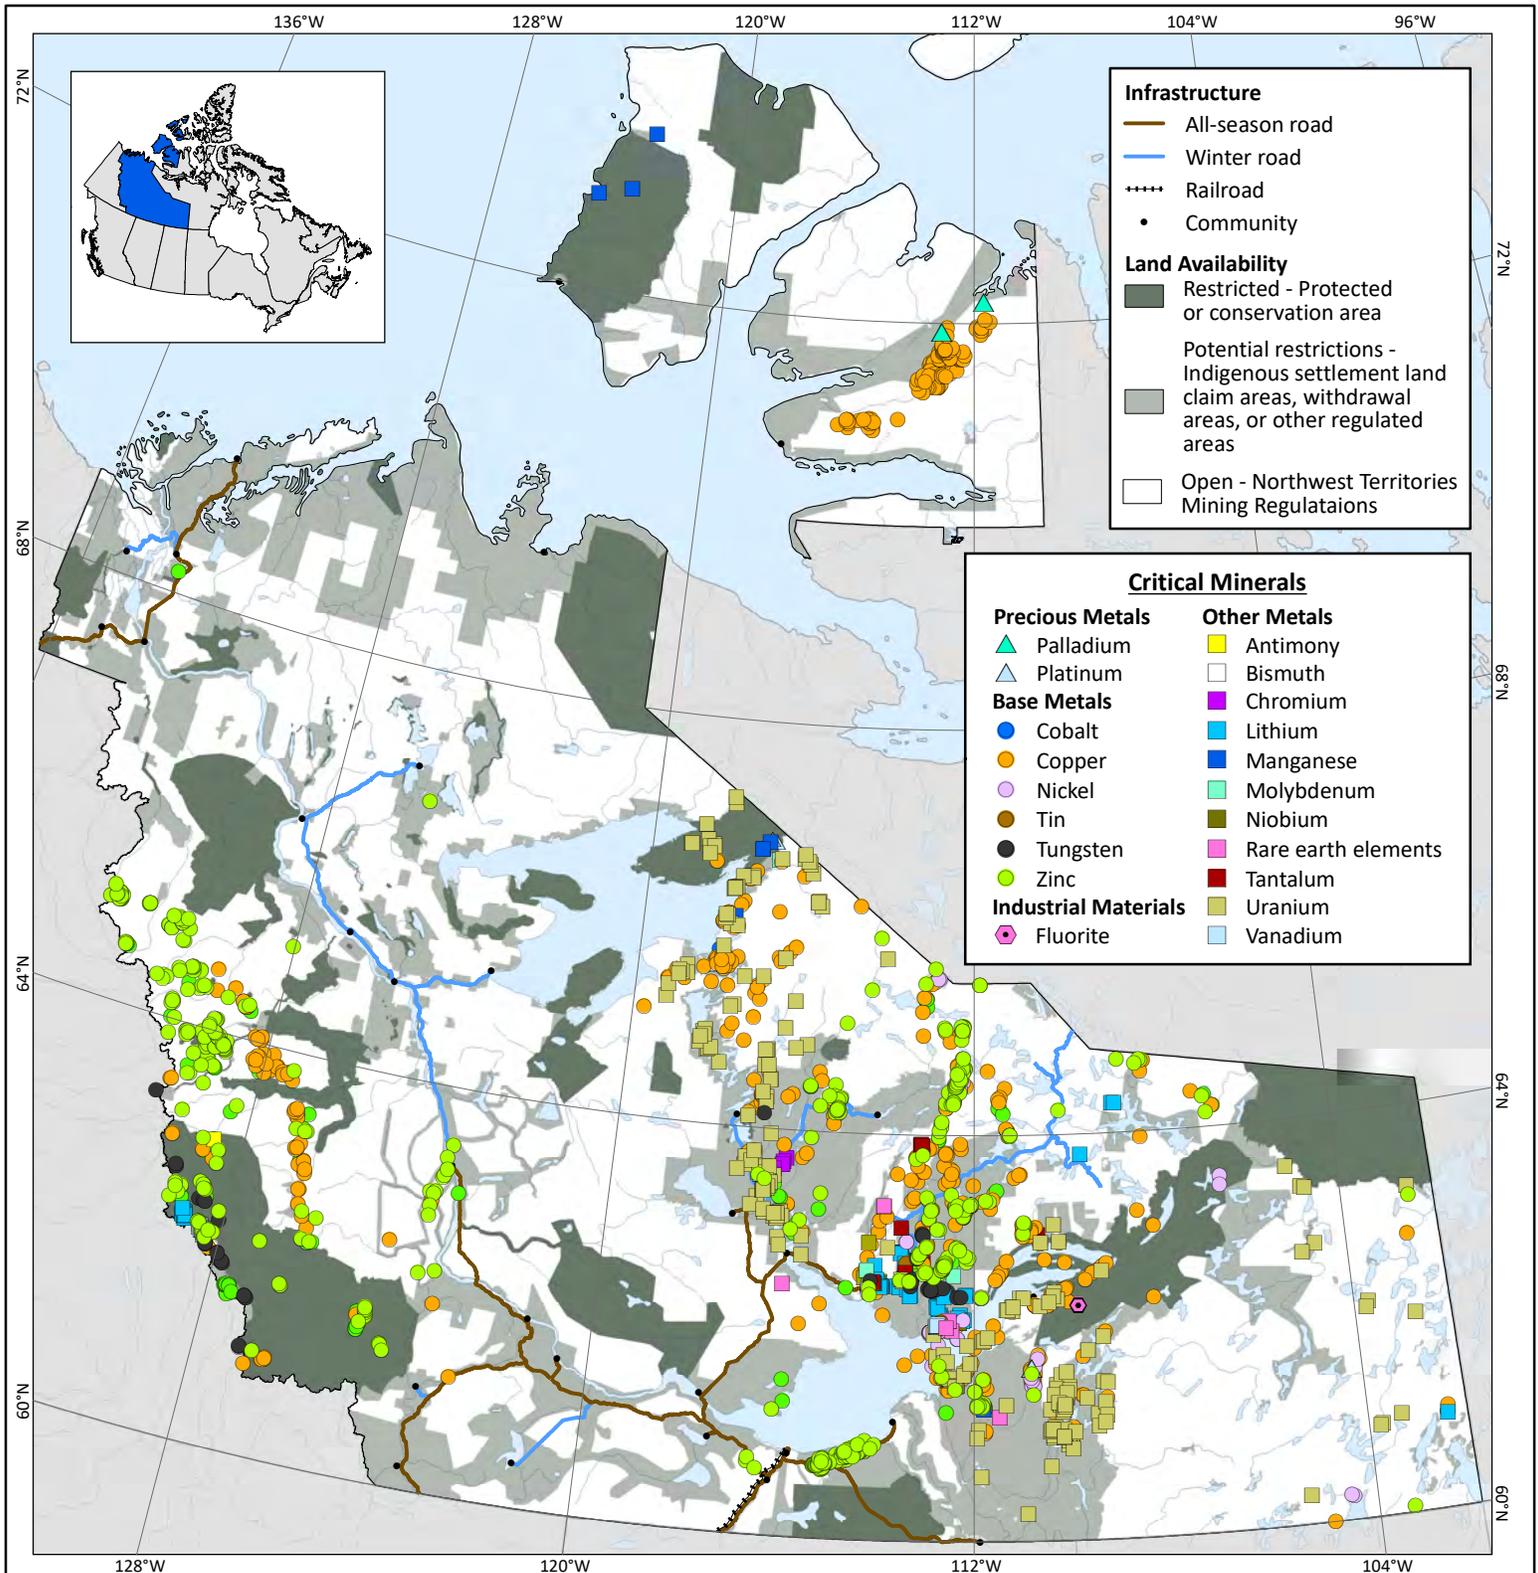

This product is based on an extract of the Northwest Territories Geological Survey (NTGS) showings database to illustrate critical mineral occurrences in the Northwest Territories (NWT). It is intended to show general trends and variability of the metallogeny and distribution of critical mineral showings in the NWT. In all cases, source documents from which this product was compiled should be consulted before investment or other decisions are made. Specific limitations of this data include, but are not limited to:

- Showings entered in the NTGS showings database are based on the value of a specific commodity occurring at or above a threshold value at the time the reference information was entered into the database. Some of these values have, and will change over time.
- The showings data, including location coordinates are compiled from a variety of sources and are of varying quality. Coordinates may have been obtained from a pre-existing National Mineral showing database (CanMinDex), prospector sketch maps, hand plotted on 1:50 000 scale claim maps, early GPS coordinates that lack modern accuracy, mathematical translation from mine and exploration grids of unknown accuracy, and a variety of other methods. In all cases the accuracy of coordinate data should be considered suspect and always checked against the original source data. The NTGS showings database does make comment on the method and reliability of coordinate data where this is known.
- In some cases, multiple unique showings have been entered for the same geochemical anomaly. This can happen when successive generations of work are not recognized as work conducted on the same showing, usually because of location inaccuracies.
- The mineral tenure information presented on these maps and in the associated tables change frequently and must not be relied upon as current. Current NWT mineral tenure may be found at: https://www.maps.geomatics.gov.nt.ca/Html5Viewer_PROD/index.html?viewer=NWT_MTV
- The various land use and land disposition boundaries shown on the map and described in the associated table may change over time. Regulations, laws, and permitted land uses associated with these polygons can also change over time. These data are not administered by the Department of Industry, Tourism and Investment, and the user must contact the respective data authority for the boundaries and regulations pertaining to the area of interest.
- Be aware that land use, mineral tenure, and other properties assigned to the showings data were performed using GIS functions. In some instances, errors in polygon boundaries and showing locations will result in errors in land use classification and mineral tenure.
